

Fujinon RS232 Lens Control

Description

Image Labs has developed a flexible software package for controlling Fujinon lenses with PC control. These include lenses with QP1 and ZP1 suffixes.

Features

- Controls zoom, focus and iris
- Controls additional lens features like 2X magnifier and IR filters on applicable lenses
- Includes easy to use user interface
- Include programming library DLL's for Visual C++ or Visual Basic

Lenses Supported

- C22x23R2D-ZP1
- D60x12.5R3DE-ZP1
- H22x11.5R2D-QP1
- C22x17R2D-QP1
- Call us about others – we have interfaces for most Fujinon lenses
- While the lens is serial RS232, control from the PC can be done over RS485 or Ethernet using converters

Typical Applications

- Security Sites
- Automatic Inspection
- Process Control
- Machine Vision
- Stereo Vision

Software – Includes libraries for Visual C++, and easy to use interface:
